T-cell receptor beta chain V-D-J region (140-2C) - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Date: 17-Jul-1992 #sequence_revision 17-Jul-1992 #text_change 30-May-1997
C;Accession: PT0724; PT0555
B;Feeney, A.J.: 115-124, 1991
A;Title: Junctional sequences of fetal T cell receptor beta chains have few N regions. A;Reference number: PT0509; MUID:91277601; PMID:1711558
A;Accession: PT0724
A;Accession: PT0724
A;Accession: PT0555
A;Experimental source: newborn thymus, strain BALB/c (clone 140-2C)
A;Accession: PT0555
A;Status: translation not shown

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Isolation, primary structure and synthesis of two neuropeptides from "Isolation, primary structure and synthesis of two Technophaca maderae: members of a new family of Cephalomyotropic peptide stimulates contractile activity of cockroach protodeum (hindgut).
-! FUNCTION: This cephalomyotropic peptide stimulates contractile activity of cockroach protodeum (hindgut).
-! SUBCELLUIAR LOCATION: Secreted.
Amidation; Direct protein sequencing; Neuropeptide.
MOD_RES 8 Glycine amide.

Leucophasa maderae: members of a new family of Cephalomyotropins.";

Comp. Blochem. Physiol. 84C:271-276(1986).

-!- FUNCTION: This cephalomyotropic peptide stimulates contractile activity of cockroach protodeum (hindgut).

-!- SUBCELLULAR LOCATION: Secreted.

Amidation; Direct protein sequencing; Neuropeptide.

MOD RES

8 Glycine amide.

Frimary structure and synthesis of two additional neuropeptides from
Leucophaea maderae: members of a new family of Cephalomyotropins.";
Comp. Biochem. Physiol. 84C:271-276 (1986).

-!- FUNCTION: This cephalomyotropic peptide stimulates contractile
activity of cockroach protodeum (hindgut).
                                                                                                                                                                                                                                                                                                                                           01-MAY-1991 (Rel. 18, Created)
01-MAY-1991 (Rel. 18, Last sequence update)

MA KOC E.C., Burkhart W., Blackburn K., Moseley A., Spremulli L.L.;
The small subunit of the mammalian mitochondrial ribosome:
The small subunit of the full complement of ribosomal proteins present.";
U. D. Biol. Chem. 276:1934(2201).
The small subunit
Cass which comprises a 12S rRNA and about 30 distinct proteins.
TO SUBCELLULAR LOCATION: Mitochondrian, Ribosomal protein.

Direct protein sequencing; Mitochondrian, Ribosomal protein.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Published Applications AA:*

Patent No. US20020055482A1

GENERAL INCORMATION:

APPLICANT: Huber, Erian

APPLICANT: Richards, Cynthia

TITLE OF INVENTION: Molecular Constructs Containing a Carcinoembryonic

TITLE OF INVENTION: Molecular Constructs Containing a Carcinoembryonic

TITLE OF INVENTION: Molecular Constructs

TITLE OF INVENTION: Sequence

FILE OF INVENTION: Sequence

FILE OF INVENTION: Sequence

CURRENT APPLICATION NUMBER: US/09/947,925A

CURRENT FILING DATE: 2001-09-06

PRIOR APPLICATION NUMBER: US/08/154,712

PRIOR FILING DATE: 1993-11-19

NUMBER OF SEQ ID NOS: 36

SOFTWARE: Patentin version 3.0

SEQ ID NO 20

LENGTH: 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NAME/KEY: misc_feature

Squence 21, Application US/08191571

Patent No. 5521156

GENERAL INFORMATION:

APPLICANT: Owen, Thomas J.

APPLICANT: Wedlacz, Elizabeth M

APPLICANT: Rudlacz, Elizabeth M

APPLICANT: Harbeson, Scott L

TITLE OF INVENTION: Cyclic Neurokinin A Antagonists

NUMBER OF SEQUENCES: 36

CORRESPEDUBNICE ADDRESS:

ADDRESSE: Marion Merrell Dow Inc.

STREET: P. O. Box 156300 2110 E. Galbraith Rd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               OPERATING SYSTEM: PC-DOS/MS-DUS
SOTTWARE: Patentin Release #1.0, Version #1.25
CUBRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/191,571
FILING DATE: 03-FBB.1994
CLASSIFICATION: 514
ATTORNEY AGENT INFORMATION:
NAME: Boudreaux, William R
REGISTRATION NUMBER: 35,796
REGISTRATION NUMBER: 35,796
REPERBUCK POCKET NUMBER: M01718
TELECOMMUNICATION INFORMATION:
TELEPHONE: 513-948-6566
TELEPHONE: 513-948-7961 or 4681
TELER: 214320
INFORMATION FOR SEQ ID NO: 21:
SEQUENCE CHARACTERISTICS:
LENGTH: 8 amino acid
TYPE: amino acid
TYPE: amino acid
TYPE: peptide
                                                                                                                                                                                                                                                                                                                                                                                    00000

Sequence 7, Application US/08526710
Sequence 7, Application US/08526710
Fatent No. 5622699
GENERAL INFORMATION:
APPLICANT: Ruoslahti, Erkki
APPLICANT: Pasqualini, Renata
TITLE OF INVENTION: Method of Identifying Molecules That
TITLE OF INVENTION: Home to a Selected Organ in Vivo
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Flores
STREET: 4370 La Jolla Village Drive, Suite 700
            Sequence 4, Application US/08417624
Patent No. 5618685
GENERAL INFORMATION:
APPLICANT: Darke, Paul L.
APPLICANT: Kuo, Lawrence C.
TITLE OF INVENTION: ACTIVATION OF HERPES SIMPLEX VIRUS
TITLE OF INVENTION: PROTEASE BY KOSMOTROPES
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                     COUNTRY: USA

Sequence 8, Application US/08526710
Patent No. 5622699
GENERAL INFORMATION:
APPLICANT: Pasqualini, Erkki
APPLICANT: Pasqualini, Renata
TITLE OF INVENTION: Method of Identifying Molecules That
TITLE OF INVENTION: Method of Selected Organ In Vivo
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:
ADDRESSEE: ADDRESSE:
ADDRESSEE: ADDRESSE:
ADDRESSEE: ADDRES
                                                                    COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/526,710
FILING DATE: 11-SEP-1995
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Campbell, Cathryn A.
REFERENCE/DOCKET NUMBER: P-LJ 1779
TELECOMMUNICATION NUMBER: P-LJ 1779
TELECOMMUNICATION NUMBER: P-LJ 1779

```
matrix (SCW) test; responding lymphocyte The peptide reacts with lymphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by 'conservative' maino acid substitutions. (Updated on 09-JAM-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                      Cancer detection; malignancy detection; structuredness of cytoplasmic.

It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a class of peptides which differ from each other by 'conservative' maino acid substitutions. Called Peptide II. (Updated on 09-JANZ-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PI
                                                              The peptide of the invention shows excellent ACE inhibitory activity and is useful as an antihypertensive agent, having low toxicity and good stability. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 24-OCT-2003 to standardise OS field)

```
matrix (SCM) test, responding lymphocyte The peptide reacts with lymphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by 'conservative' maino acid subsetiutions. (Updated on 09-JAM-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PI field.)
                                   Cancer detection; malignancy detection; structuredness of cytoplasmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cancer detection; malignancy detection; structuredness of cytoplasmic.

    matrix (SCM) test; responding lymphocyte The peptide reacts with lymphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by conservative' maino acid substitutions. (Updated on 09-JMM-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PI field.)

                                                                                                                        matrix (SCM) test; responding lymphocyte The peptide reacts with lymphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by conservative' maino acid substitutions. (Updated on 09-JAM-2003 to add missing OS field.) matrix (SCW) test; responding lymphocyte The peptide reacts with lymphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by 'conservative' amino acid substitutions. It is called peptide III. (Updated on 09-JAN-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PI field.)

matrix (SCM) test; responding lymphocyte The peptide reacts with lymphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by 'conservative' maino acid subscitutions. (Updated on 09-JAM-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                               Cancer detection; malignancy detection; structuredness of cytoplasmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic SCM-active cancer recognition peptide(s) - DNA probes and antibodies used to provide sensitive assays for detecting malignancy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    800000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length:

It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by conservative amino acid substitutions. (Updated on 09-JAM-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)

It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by conservative' maino acid substitutions. (Updated on 09-JAM-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct pa field.) (Updated on 25-MAR-2003 to correct pa field.)

Imphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from footnes free of malignancy. It is one of a group of peptides which differ from each other by 'conservative' amino acid substitutions. (Updated on 09-JAN-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct DA field.)

matrix (SCM) test, responding lymphocyte The peptide reacts with lymphocytes from donors with any type of malignancy. It can be used as a challenging agent in the SCM test which is used to distinguish lymphocytes isolated from mammals with cancer from those isolated from donors free of malignancy. It is one of a group of peptides which differ from each other by conservative maino acid substitutions. (Updated on 09-JAM-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cancer detection; malignancy detection; structuredness of cytoplasmic.

"Purification of an acidic plastocyanin from Microcystis aeruginosa.";
Biochim. Biophys. Acta 973:111-117(1989).
-!- FUNCTION: Participates in electron transfer between P700 and the Cytochrome b6-f complex in photosystem I.
-!- SIMILARITY: Contains 1 plastocyanin-like domain.
